Version history Table of versions of AutoCAD to date. For a full list of version numbers, see History. AutoCAD is a graphical design software application used for the creation and editing of 2D and 3D computer-based drawings and models. Its name is derived from the name of the Autodesk developers who created it, named the application AutoCAD. It is widely used for most types of architectural, mechanical, and electrical engineering drawing design. Additionally, AutoCAD is used by many other types of design professionals, including product designers, graphic designers, land surveyors, architects, draftsmen, and visual effects artists. Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. Starting with version 2.0, AutoCAD was available for use on personal computers that had either an IBM-compatible PC or Macintosh platform. By releasing AutoCAD as a Windows application, AutoCAD gained wide adoption on the Microsoft Windows platform. AutoCAD can be downloaded directly from the AutoCAD website and can also be purchased and downloaded from Autodesk's partner network for various platforms and operating systems. In September 2015, AutoCAD LT was renamed to AutoCAD in early 2017. Background In late 1980, Autodesk released Sketchpad, a word processor application that became the company's first serious foray into the CAD market. AutoCAD took off in a big way, and by 1982, a third of Autodesk's sales were CAD products, with revenues that year reaching \$100 million. AutoCAD's growth was rapid, with the application being downloaded more than 50,000 times in its first year. At the same time, Autodesk struggled to grow the company and expand the market for CAD. In 1984, AutoCAD 2.0 was released, and a year later, 3D was added. The relationship with the Hewlett-Packard (HP) company became strained in the mid 1980s as Autodesk's executives, despite its expertise in the CAD market, did not adequately recognize the necessity of becoming a professional engineering software company. In November 1986, Autodesk

Adobe Flash, which is AutoCAD's major graphic tool, has several plugins, that allow users to create visual effects within the program. The Extensible Graphics Interchange Framework (EGIF) is a programming tool for development and runtime creation of authoring tools for Flash content, including additional visual elements. Since Flash supports dynamic creation of authoring tools, AutoCAD can be extended through the Dynamic Graphics Exchange Framework (DGXF) and the Data Driven page elements. Tools Some AutoCAD features require additional plug-ins. The most well-known AutoCAD plugins are: They support the following AutoCAD features: Mesh modeling (Mesh modeling can be enabled through either of these plugins). The Structure button in the Surface tool palette (or through the Use Surfaces command). Specular highlight (used for the shading of surfaces). Symbol authoring (used to add or update symbols in the drawing). The Solid Mesh command (used to create mesh surfaces). Trail and quadratic bevels (used for creating beam and plate styles). In addition, it has a number of tools in the graphical editor such as the Rule-based, Artistic, Parametric, Align and Object commands. ObjectARX is the base for: The C++ class library, which allows developers to create add-on products for AutoCAD. Kinda exciting news i suppose. Im still worried about something bigger happening Looking at the sizes of those weapons, i do not see how the samurai and the ninja are at the same level. Should the usa government and the asian countries be at the same level of power in the future? Maybe after Japan gets their second bomb and asian and the western countries seek nuclear power, Japan will become the third nuclear nation, but it will not be a power that will change the world, as the asian and west will have already achieved their nuclear weapons. The usa has still got nukes and China is not far behind, so why is Japan worried? I think that the guy on the 3rd post has a point though. As much as Japan might want to become a great power, I think that the government is still trying to avoid war. In the north of Japan, Russia has a lot of islands and Japan wants to prevent war there. In the south of Japan, they have historical problems with China. Even if Japan becomes a great power, they will never really make any moves to cause war. I think that the usa are going to expand to the east and that will make China more nervous and I think that China will become a bit of a nuclear power. Japan will be left in the dust, but it will still be powerful. Maybe if Japan gets invaded by the Chinese, the Japanese will start gaining some of their military might back. But I doubt that will happen. I thought the russian read wasn't scared of an invasion, he's just waiting to get a nuke
